Biomethane development will help meet environmental targets | Energy transition and biofuels

Environmental issues profoundly transform our lives. In the ongoing energy transition, we must gradually shift from carbon-intensive fossil fuels to renewables like solar, wind, hydro energy, and biofuels. Biofuels, resembling existing types of fossil fuel, are of particular interest to today's economy.

Wojciech Wrochna LL.M. and Bartosz Brzyski argue that in order to meet the environmental objectives of its ESG policies, industry can increase the share of biofuels in production processes.
