

Investment fund cloud services only with Kochański & Partners

We were the exclusive legal partner for the Cloud Deployment Model co-developed with the Chamber of Fund and Asset Managers (IZFiA).

Specifically designed for the investment fund industry, the Model is a set of principles and a practical guide for cloud-related projects and policies. It explains how regulatory requirements should be implemented and includes a number of ready-to-use supporting tools, such as an information classification matrix.

Our goal was to support the digital transformation of investment funds, which are considered highly sensitive and require special attention due to strict regulatory requirements and industry specifics.

With the Model, these funds are now able to deploy cloud services more efficiently and effectively, using a single, common, understandable and cost-effective standard, while ensuring the highest levels of cyber security and information protection for their clients.
